ELO Product Overview

The right solution for every need

To be effective, ECM and DMS solutions must address a company's specific business needs - regardless of the company's size. This is why we at ELO have developed products to suit companies of all sizes. It doesn't matter if your company has just a handful of employees, is an SME with hundreds of workstations, or a multinational company with thousands of employees, ELO has the right solution to match your needs.

Our **ELO ECM Suite** comprises the modular client/server solution **ELO**professional for SMEs, and **ELO**enterprise, the platform-independent high-end solution for large companies.

Complementing this is **ELO DMS Desktop 12** with the ELO Client for Microsoft Outlook and the sidebar tool ELO Desktop Client, which delivers ECM functions in a Microsoft environment. **ELOxc for Microsoft EWS** is a powerful e-mail management solution that reduces the load on your Exchange Server and helps you meet document retention obligations as well as data privacy requirements under GDPR. **ELO**office, the perfect entry-level digital document management solution for home users and small businesses, rounds out the product portfolio.

Here is an overview of the individual ELO products and a comparison of their main functions.

The ELO product family

ELO ECM Suite

ELOenterprise
Software for: Enterprise Content Management

The high-end solution **ELOenterprise** is platform independent, highly scalable, multi-tenant capable, and especially suited for data centers and portals, making it ideal for meeting the demanding tasks of large companies and corporations. Service-oriented architecture (SOA) allows for optimal integration of ELO ECM functionalities with specific business processes.

ELOprofessional
Software for: Enterprise Content Management

ELOprofessional is a modular client/server solution designed to suit the needs of SMEs. The software's flexibility ensures that it can be optimally adapted to your company's requirements. The filing system's familiar look-and-feel enables employees to get up to speed with the program with little training. In addition, the system allows simple integration of all company applications, such as Microsoft products, CRM or ERP systems.

ELO DMS Desktop
Software for: Document Management

ELO DMS Desktop adds ECM functionalities to your Microsoft Windows environment, accommodating work style preferences and enabling users to effortlessly manage business documents. The ELO Client for Microsoft Outlook provides ECM functions for handling e-mails. ELO Desktop Client 12 is integrated as a sidebar on Windows desktop and is optimized for working with Microsoft Office documents. Users can transfer files from Microsoft Word, Excel or PowerPoint, as well as all other document types, to the ELO repository with a single click.

ELOxc for Microsoft EWS
Software for: E-Mail Management

Storing e-mails according to retention policies poses a challenge for every company. There are two important factors that need to be considered: statutory retention periods for business-related documents, and the protection of personal data under GDPR. An efficient e-mail management system ensures that information within your organization is routed properly, helping to streamline your processes. **ELOxc for Microsoft EWS** provides all the necessary functions to address these requirements.

ELOoffice
Einfach. Besser. Organisiert.

ELOoffice is the ideal entry-level digital document management solution for home users and small businesses. It enables you to optimize and automate work processes by managing all documents in digital form (Office files, e-mail, invoices, delivery receipts, faxes, etc.) in a flexible and intuitive file structure. The standard package provides seamless integration with Microsoft Office (e.g. Microsoft Outlook).
